The most in-depth study of how America’s children spend their afternoons

October 2009
America After 3PM Methodology

The Afterschool Alliance worked with researchers at RTi to collect data via U.S. mail surveys from 29,754 households. The findings are nationally representative. In some instances, the findings have been projected to represent the 57.3 million K-12 youth in the country based on 2007 U.S. Census data. All of the projected estimates are based on data that were weighted by income and ethnicity. The overall margin of error is +/- 0.56 percent.

The methodology used in 2009 was nearly identical to that used 2004. Multiple sampling methodologies were utilized to maximize the scope and reach of this research. To ensure comparability with the original research, and to be most inclusive of all socio-economic strata, mail sampling was completed using IPSOS, a National Mail Panel company. Mail surveys were sent to parents of school age children in each of the 50 states. The random sample out-go reflected the geo-demography of the U.S. population of parents of school age children. Additional screening was done by phone in states with low mail survey completion rates.

Acknowledgements

America After 3PM was sponsored by the JCPenney Afterschool Fund. The JCPenney Afterschool Fund is a charitable organization committed to providing children in need with access to life-enriching afterschool programs that inspire children to be smart, strong and socially responsible. To date, JCPenney and the JCPenney Afterschool Fund have contributed more than $80 million to local afterschool programs in every JCPenney community through partnerships with the YMCA of the USA, Boys & Girls Clubs of America, National 4-H and FIRST (For Inspiration and Recognition of Science and Technology).

The Afterschool Alliance also thanks RTi for assisting with the survey design, data collection and analysis of the data. Finally, we thank the households who so generously gave of their time by completing the surveys and providing the data for America After 3PM.
National Findings

For many adults in America, thinking about the hours after the school day ends conjures up memories of doing homework, playing pick-up basketball, taking guitar or dance lessons or going home to Mom and a snack. But for millions of children today, those images are nothing like their reality. In fact, each day in America, some 15 million children—some as young as five years old—are without supervision at home or on the streets.

Children who are unsupervised after school are not only in danger of becoming victims of crimes or accidents; they are also at risk in other less dramatic but equally troubling ways. These 15.1 million children are at risk of falling behind academically, socially and emotionally. They are at higher risk than other children and youth of substance abuse, gang involvement, teen pregnancy and dropping out.

A small but growing number of our children are avoiding these pitfalls and reaping the benefits of quality, affordable afterschool programs – programs that keep kids safe, inspire them to learn and help working families.

Until 2004, there was little reliable data about how children spent the hours after schools close and before parents return home from work. Experts estimated that five to 15 million kids were unsupervised after school. There also was no reliable data on the number of children in afterschool programs, and how many families sought but did not find the programs they needed.

In 2004, the Afterschool Alliance and the JCPenney Afterschool Fund commissioned the most in-depth study ever to examine how America’s kids spend their after school hours – America After 3PM. Conducted by RTi, a market research firm, America After 3PM definitively answered questions such as:

- What are kids doing after school?
- How many kids are in afterschool programs?
- How many kids go home alone?
- What is the demand for afterschool programs?

In spring 2009, the Afterschool Alliance and the JCPenney Afterschool Fund again worked with RTi to update the study to determine how things have changed since 2004. In total, nearly 30,000 households were surveyed for the 2009 update to America After 3PM. While there is good news to report, it is also clear that there is much more to be done to give all children and families access to quality afterschool programs.

This updated America After 3PM study offers the most comprehensive and accurate picture in five years of what this nation’s children are doing each day after school. It provides detailed information about parent attitudes toward after school care and satisfaction with afterschool programs, and data about demand for afterschool, including the likelihood that non-participating children would join afterschool programs if they were available.
Key Findings

• More than a quarter of America’s schoolchildren are on their own after the school day ends, and before parents get home from work. Despite growing awareness that children are at particular risk during these afternoon hours, the number and percentage of children left on their own in the afternoons has actually increased in the last five years.
  – The number of children who are unsupervised in the afternoons has risen from 14.3 million (25 percent) in 2004, to 15.1 million (26 percent) in 2009.
  – Today, 30 percent of middle school students (3,722,219) and four percent of elementary school children (1,133,989) are unsupervised after the school bell rings.

• The availability of afterschool programming for kids has improved in the last five years and families are taking good advantage. But there are not enough programs to keep pace with rising need.
  – The number and percentage of children participating in afterschool programs has increased significantly since 2004, with 8.4 million children (15 percent) now participating. That compares with 6.5 million children in 2004 (11 percent).
  – Parents of 18.5 million children (38 percent) who are not currently participating in afterschool programs say they would enroll their children if a program were available to them. That is a significant increase from 15.3 million (30 percent) in 2004.

• While ethnic minority children are more likely than others to be in afterschool programs, millions are unsupervised each afternoon and the unmet need is huge.
  – Twenty-five percent of Asian-American, 24 percent of African-American, 21 percent of Hispanic and 16 percent of Native American children attend afterschool programs, compared to the national average of 15 percent.
  – Yet 28 percent of African-American, 21 percent of Hispanic and 24 percent of both Asian-American and Native American children have no adult supervision after the school day ends.
  – While two in five parents overall (38 percent) would enroll their children if afterschool programs were available, more than half of African-American (61 percent) and Native American (51 percent) parents, and nearly half of Hispanic and Asian-American parents (47 percent), say they would.

• The economy is taking a toll on participation in afterschool programs.
  – Parents cite a number of barriers to enrolling their children in afterschool programs with more than half of parents (52 percent) citing cost and more than one in four reporting hours of operation (26 percent) and availability (27 percent) as reasons for non-participation.
  – On average, parents who pay for afterschool programs pay $67 per week, up from an average of $44 per child per week five years ago.
  – Nearly one in three households (31 percent) report that their children are spending more time in the care of a parent after school now than a year ago. Reasons include changes in work status and availability/affordability of programs.
While overall satisfaction with afterschool programs remains consistent since 2004, mean satisfaction is down on several factors, including cost, location and number of days/hours per day a child can attend a program.

- Americans see afterschool programs as an answer. The vast majority of parents of children in afterschool programs are satisfied with the programs their children attend, and public support for afterschool programs is unusually strong.
  - Nine in 10 parents (89 percent) are satisfied with the afterschool programs their children attend.
  - Nine in 10 parents surveyed (91 percent) agree that there should be “some type of organized activity or place for children and teens to go after school every day that provides opportunities to learn.”
  - Eight in 10 parents (83 percent) support public funding for afterschool programs.
  - Parents recognize that afterschool is more than just a safe place for kids. According to parents of children in afterschool, the top benefits of participation include helping with social skills, keeping kids safe, providing opportunities to be physically active and helping their child succeed in school.

Afterschool Participants: A Profile

The vast majority of the 8.4 million children attending afterschool programs are in elementary school.

On average, kids in afterschool programs participate three days per week for an average of 8.1 hours per week.

41 percent of kids in afterschool programs are from low-income households.

- As was the case in 2004, nine in 10 parents are satisfied with the afterschool program their child attends. The aspects of programs that produce the highest levels of satisfaction include safety, the convenience of location and hours as well as the quality of care and staff.
- Parents of afterschool participants recognize that afterschool is more than just a safe place for kids. According to these parents, the top benefits of participation include helping with social skills, keeping kids safe, providing opportunities to be physically active and helping their child succeed in school.
- Parents report that public schools are the largest provider of afterschool programs. YMCAs, Boys and Girls Clubs, religious organizations and private schools round out the top five providers of afterschool programs.
- When asked to think about the factors that played a role in selecting their children’s afterschool programs, parents most often cited child enjoyment, followed by convenient location, cost, safety, quality of care and the range of activities available.
On average, families spend $67 per week per child for afterschool programs, with programs for younger children (grades K through 5) costing more than programs for older children. The cost of afterschool programs for children in grades K through 5 averages $70 per week, compared to $63 per week for children in grades 6 through 8 and $58 per week for children in grades 9 through 12.

Only 15 percent of families report receiving any government assistance with fees for afterschool programs. Those families report receiving an average of $65 per week, which is the average cost reported by families who pay for afterschool programs.

Kids in Self Care: A Profile

Among the 15.1 million unsupervised kids, the majority are in high school, but a substantial number are in middle school and elementary school.

On average, kids in self care spend 8 hours per week unsupervised.

45 percent of kids in self care are from low-income households.
Among the 18.5 million likely participants, the majority are in elementary school, with nearly equal percentages in middle school and high school.

52 percent of likely participants are from low-income households.

- Among the array of potential benefits of afterschool, parents who say their kids would participate in afterschool if a program were available are most likely to say that the program would provide a fun experience for their children, would provide opportunities for community service and service learning, would keep their children safe, would provide workforce skills like teamwork and critical thinking, and would provide academic enrichment.
- Aside from the presence of a parent at home during the after school hours, the primary barriers to participation reported by those who would be in a program if one were available include cost and transportation.
Grade Level Findings
There are significant differences in how students at different grade levels spend their after school hours, as well as differences in satisfaction, attitudes toward afterschool programs and barriers to enrollment.

1 A note of caution about the self care data: Experts believe parents are hesitant to admit that children are unsupervised, so the numbers reported regarding self care may underestimate the number of children actually in self care.
Afterschool Program Participation and Satisfaction by Grade Level

Afterschool program participation is highest at the elementary school level, with 17 percent of elementary students participating in afterschool programs, followed by 12 percent of middle school students. Only seven percent of high school students participate in afterschool programs.

Satisfaction with afterschool programs is strong and comparable across grade levels – nine in 10 parents (89 percent) overall are satisfied with the afterschool programs their children attend. However, satisfaction with specific features of afterschool programs suggests that different factors drive satisfaction for parents of students of different ages.

- Parents of elementary school aged children report greater satisfaction with location.
- Parents with children in middle school report greater satisfaction with transportation and tutoring.
- Those with children in high school are more satisfied with those areas pertaining to ‘life skills,’ such as access to mentors, workforce skills, technology and community service.

Barriers to Enrollment by Grade Level

After lack of need because a parent is home after school, the top barriers to enrollment vary by grade level.

- Cost and hours of operation are larger hurdles to parents of elementary aged children.
- Quality of care and academics are bigger barriers among parents of non-high school children.
- Availability is a barrier across grade levels, but especially among middle and high school aged children.

</table>

- The parent or guardian is the primary caregiver after the school day ends across all ethnic groups.
- A large percentage of Caucasian and African-American children are spending time in self care (29 and 28 percent respectively), while a significantly smaller percentage of Hispanics are responsible for caring for themselves (21 percent).
- Native Americans are least likely to agree that afterschool programs are available (22 percent).
- African-Americans and Native Americans report the highest levels of demand for programs. Sixty-one percent of African-American parents and 51 percent of Native American parents report that their child would likely participate in an afterschool program if one were available in their area.

Afterschool Program Participation and Satisfaction

- Both major minority populations report heavier afterschool program participation than the general population, with nearly one in four African-American (24 percent) and more than one in five Hispanic (21 percent) children participating in an afterschool program, compared to 15 percent of children overall. Asian-American children are also more likely to participate in afterschool programs (25 percent).
• Overall satisfaction with afterschool programs is lowest—but still very high—among Native Americans (80 percent) and Asian-Americans (81 percent).

Barriers to Enrollment
• After lack of need because a parent is home after school, the top barriers to enrollment are similar among ethnic minorities.
  – Cost is the leading barrier for Asian-Americans and Hispanics, while African-Americans are less likely to participate due to a preference for alternative activities.
  – Both Hispanics and African-Americans list lack of sufficient transportation as one of their largest barriers to participation.

Differences by Socioeconomic Status
To examine how afterschool program participation and satisfaction differ by socioeconomic levels, researchers compared households who reported qualifying for free or reduced price lunch to households that do not qualify. Qualification for free or reduced price lunch is a commonly used proxy for families living in or near poverty.

These comparisons revealed significant differences in how children from families of different socioeconomic backgrounds spend their after school hours, as well as differences in satisfaction, attitudes toward afterschool programs and barriers to enrollment.

<table>

</tbody>
</table>

• Like the overall population, the parent or guardian is the primary caregiver after the school day ends in families that qualify for free or reduced price lunch (75 percent).
• While children in families that qualify for free or reduced price lunches are less likely to be in self care in the afternoons (26 percent of children in low-income families vs. 29 percent among those who do not qualify), children in low-income families who are unsupervised in the afternoons spend more hours in self care (8.4 per week, on average) than children from higher income families (7.7 hours per week).
• Afterschool program participation is significantly higher among those who qualify for free or reduced price lunch (18 percent) than among those who do not qualify (14 percent). And, 50 percent of families who qualify for free or reduced lunch would participate in an afterschool program if one were available.
• Families that qualify for free or reduced price lunch show slightly higher levels of overall satisfaction with their afterschool programs (90 percent) than the general population (89 percent).
• Aside from lack of need because a parent is home, the top barriers to enrollment differ between those who qualify for free and reduced price lunch and those who do not.
  – In general, parents who qualify for free and reduced price lunch cite as barriers to afterschool participation cost, lack of transportation, and lack of availability more often than parents who do not qualify for free or reduced price lunch.

A Glance Back and Looking Forward to Afterschool for All

The 2004 America After 3PM study concluded that the supply of afterschool programs was insufficient to meet the demand, and that the country had much work to do to meet the needs of all children and families. Five years later, there is reason for both hope and concern.

Nearly two million more kids are participating in afterschool programs today than five years ago. Public awareness and appreciation of the benefits these programs provide has also grown, so that today nearly two in five kids who are not in programs would be, if a program were available. Satisfaction with programs is high and has remained steady.

But these new findings are sobering as well. The supply of afterschool programs simply is not keeping up with demand. More kids are in self care now than were in 2004, and parent satisfaction with the availability of afterschool care remains low. In addition, funding for afterschool programs is grossly inadequate, and many programs have been forced to reduce services, increase fees or even shut their doors, just when families need them most. In a 2009 survey of afterschool program leaders, one in 10 reported having to make significant cuts that would result in reduced services or even closing their doors altogether. Further, nearly all programs (89 percent) expected the recession to impact them in the 2009-2010 school year, with more than one-third expecting the recession to “very much” affect their program.

In order for afterschool programs to meet the needs of the 15.1 million children in self care and the 18.5 million children whose parents say they would join a program if one were available, increased investments are needed across all sectors.

Released in early 2009, The Roadmap to Afterschool for All found that parents pay more than three-quarters of the afterschool bill, an average of $2,400 per child per year, or $65 per child per week. Even among low-income families, the parent contribution makes up 69 percent of the overall cost of afterschool. New data from America After 3PM are nearly identical, showing that parents pay an average of $67 per week for afterschool programs. While it’s reasonable to expect parents to pay the costs of caring for their children, the nation benefits when all children have a real chance to learn and thrive. Only significantly greater investment from all sectors will ensure that all children, and particularly those most at-risk, have access to the quality, affordable afterschool programs that can keep kids safe, inspire them to learn and help working families.

History has proven that public and private investments together can create strong, sustainable afterschool networks and engage more children in programs that can help them thrive.
academically, socially and emotionally. Since 2004, the federal investment in afterschool programs has grown from just under $1 billion to $1.13 billion, an increase of 14 percent. That increase in federal investment, coupled with funding from states, cities and philanthropic organizations has spurred greater availability of afterschool programs. Corporations like JCPenney, which has contributed more than $80 million to local afterschool programs, have played a key role. And, of course, parents continue to pay the bulk of the costs of afterschool. Over the course of five years, these combined investments have led to a nearly 30 percent increase in the number of kids in afterschool programs (8.4 million now vs. 6.5 million in 2004).

Yet, the demand has also increased over the past five years. The number of kids who would be in an afterschool program if one were available has increased from 15.3 million in 2004 to 18.5 million in 2009. In order to meet the needs of those 18.5 million children, the nation must redouble its efforts to create an America After 3PM in which all children have access to quality, affordable afterschool programs – an America After 3PM in which every child has a greater opportunity to learn and thrive.
A Snapshot of the African-American Community After 3PM

Each day in America, millions of kids go home to an empty house after school. In recent years, the growth of quality, affordable afterschool programs—programs that keep kids safe, inspire learning and help working families—has begun to offer parents of these children positive alternatives. Over the past five years, afterschool programs have played an increasingly important role in providing valuable after school opportunities in the African-American community.

In 2009, the Afterschool Alliance conducted a household survey of nearly 30,000 families to learn how many children are in afterschool programs, how many are unsupervised after school and how these numbers compare to five years ago. Building upon and updating a similar study conducted in 2004, America After 3PM, sponsored by the JCPenney Afterschool Fund, gives the most comprehensive and accurate picture to date of what this nation’s youth are doing each day after school. The study included a specific focus on minority populations and how they are utilizing afterschool programs.

After School Care Arrangements

- African-American children are much more likely to be in afterschool programs than other children. Twenty-four percent (2,069,720) of African-American children are enrolled in afterschool programs – at schools, community centers, churches or elsewhere. By comparison, 15 percent of all children participate in afterschool programs.
- Twenty-eight percent (2,473,140) of African-American children have no adult supervision after school and are responsible for taking care of themselves during the afternoon hours.

Economic Impact

- African-American parents are feeling the impact of the economic downturn more severely than parents in general. More African-American parents agree that the current economic conditions have impacted their after school care arrangements, with 49 percent reporting that the economy has impacted how they care for their children after school (compared to 41 percent overall) and 51 percent stating that it has affected their ability to pay for care (compared to 46 percent overall).
- Four in ten (41 percent) African-American parents say their children are spending less time in the care of someone other than a parent after school this year compared to last, which is much greater than the 31 percent reported by parents overall. The primary reason for less outside care is that the parent is no longer working outside the home.

Need or Demand for Afterschool

- Demand for afterschool programs is great in the African-American community. Parents of African-American children not currently in afterschool programs are much more likely than other parents to say that they would enroll their children in quality afterschool programs if programs were available. Sixty-one percent (4,113,972) of African-American parents say they would enroll their children if programs were available compared to 38 percent of parents in general.
• African American parents are also more likely than the general population to say that there should be “some type of organized activity or place for children and teens to go after school every day that provides opportunities for them to learn.” Ninety-seven percent of African-American parents agree compared to just 91 percent agreement in general.

Satisfaction with Afterschool Programs
• African-American parents are largely satisfied with the afterschool program their child attends with 90 percent of African-American parents reporting program satisfaction compared to 89 percent overall.
• African-American parents cited child enjoyment (73 percent), convenient location (73 percent), ability to provide a safe haven (64 percent) and affordability (63 percent) as their top four reasons for selecting an afterschool program.

Barriers to Enrolling in Afterschool Programs
• After lack of need, the predominant obstacles to enrollment for African-American parents include cost, preference for alternative activities and lack of safe transportation.

According to U. S. Census data from 2007, the total African-American school-age population is 8,770,000, which is the foundation for the projections in “A Snapshot of the African-American Community After 3PM”.

14
A Snapshot of the Hispanic Community After 3PM

Each day in America, millions of kids go home to an empty house after school. In recent years, the growth of quality, affordable afterschool programs—programs that keep kids safe, inspire learning and help working families—has begun to offer parents of these children positive alternatives. Over the past five years, afterschool programs have played an increasingly important role in providing valuable after school opportunities in the Hispanic community.

In 2009, the Afterschool Alliance conducted a household survey of nearly 30,000 families to learn how many children are in afterschool programs, how many are unsupervised after school and how these numbers compare to five years ago. Building upon and updating a similar study conducted in 2004, America After 3PM, sponsored by the JCPenney Afterschool Fund, gives the most comprehensive and accurate picture to date of what this nation’s youth are doing each day after school. The study included a specific focus on minority populations and how they are utilizing afterschool programs.

After School Care Arrangements

- Hispanic children are more likely to be in afterschool programs than other children. Twenty-one percent (2,365,860) of Hispanic children are enrolled in afterschool programs – at schools, community centers, churches or elsewhere. By comparison, 15 percent of all children participate in afterschool programs.
- Twenty-one percent (2,320,796) of Hispanic children have no adult supervision after school and are responsible for taking care of themselves during the afternoon hours.

Economic Impact

- Hispanic parents are feeling the impact of the economic downturn more severely than parents in general. More Hispanic parents agree that the current economic conditions have impacted their after school care arrangements, with 55 percent reporting that the economy has impacted how they care for their children after school (compared to 41 percent overall) and 60 percent stating that it has affected their ability to pay for care (compared to 46 percent overall).
- More than one third (35 percent) of Hispanic parents say their children are spending less time in the care of someone other than a parent after school this year compared to last, which is somewhat greater than the 31 percent reported by parents overall. The primary reason for less outside care is that the parent is no longer working outside the home.

Need or Demand for Afterschool

- Demand for afterschool programs is great in the Hispanic community. Parents of Hispanic children not currently in afterschool programs are much more likely than other parents to say that they would enroll their children in quality afterschool programs, if programs were available. Forty-seven percent of Hispanic parents (4,218,666) say they would enroll their children if programs were available compared to 38 percent of parents in general.
Hispanic parents are also more likely than the general population to say that there should be “some type of organized activity or place for children and teens to go after school every day that provides opportunities for them to learn.” Ninety-six percent of Hispanic parents agree compared to just 91 percent agreement in general.

**Satisfaction with Afterschool Programs**
- Hispanic parents are largely satisfied with the afterschool program their child attends with 93 percent of Hispanic parents reporting program satisfaction compared to 89 percent overall.
- Hispanic parents cited child enjoyment (64 percent), convenient location (59 percent) and affordability (55 percent) as their top three reasons for selecting an afterschool program.

**Barriers to Enrolling in Afterschool Programs**
- After lack of need, the predominant obstacles to enrollment for Hispanic parents include cost, preference for alternative activities and transportation.

**National Comparison and Trends – 2004 to 2009**

According to U. S. Census data from 2007, the total Hispanic school-age population is 11,266,000, which is the foundation for all projections in “A Snapshot of the Hispanic Community After 3PM”. 
Top 10 States for Afterschool

Overall, America After 3PM finds that while more kids are in afterschool programs today than five years ago, the demand for programs has also increased. As would be expected, there is variability in the findings from state to state. Through an examination of a number of key indicators, a set of “Top 10 States for Afterschool” emerged. While they all have significant unmet need for afterschool programs, comparatively these “Top 10 States for Afterschool” in 2009 have some of the lowest rates of self-care combined with the highest rates of afterschool participation and satisfaction – all of which adds up to a winning combination for children and parents in these states. Yet, even in these top 10 states, too many children and families do not have access to quality afterschool opportunities.

Methodology:

To identify the “Top 10 States for Afterschool,” a composite score was computed for each state, combining the following variables:

- Percent of children in afterschool programs – weighted by the average hours per week each child spends in afterschool programs
- Percent of children in self-care – inverse proportion
- Percent of parents who agree “afterschool programs are available in my area”
- Percent of program participants who qualify for free or reduced price lunch program (proxy for low-income households)
- Percent of parents of program participants who reported satisfaction with their afterschool program
- Percent of parents of program participants who reported satisfaction with program features identified as having the greatest impact on overall program satisfaction. Based on a regression analysis, the following features were determined to be the most influential:
  - Quality of care
  - Variety of activities
  - Program cost

The composite score from each state was then indexed against the national average. The “Top 10 States for Afterschool” identified in this document are those with the highest indices.

These top 10 states are identified on the following pages in rank order with an overview of the data from the state that helped them make the top 10, followed by a description of how the state has supported afterschool programs. In addition to state-level efforts, every state benefits from the availability of federal funding through the 21st Century Community Learning Centers initiative and the Child Care and Development Block Grant. Furthermore, the Charles Stewart Mott Foundation has supported 38 states, including most of the top 10 states, through its support for Statewide Afterschool Networks, which help improve both the quantity and quality of afterschool programs in their states. Below is a summary of the how each of the “Top 10 States for Afterschool” benefitted from these national supports.

* The CCDBG dollar amounts shown equal one-fourth of the state’s total CCDBG funding. Researchers estimate that one-fourth of all CCDBG funding is used for school age child care, which includes afterschool programs.

While these 10 states are leading the nation, it’s important to note that *America After 3 PM* finds significant unmet need for afterschool programs across all states. Even in the “Top 10 States for Afterschool”, the number of children who would be in programs, if programs were available, outnumbers the number of children currently able to participate.

In all 50 states, there are parents who want their kids in afterschool programs and aren’t able to find them, usually because programs aren’t available, they can’t afford the fees, or transportation issues make it impossible. These are barriers we can and should overcome. Quality afterschool programs keep kids safe, inspire them to learn, and help working families. Every state, and the nation as a whole, has a long way to go to ensure that all kids have access to quality, affordable afterschool programs.
Hawaii

Even before afterschool was a hot policy issue at the state level, Hawaii was moving toward universal afterschool for all of its children. This is evident in the state’s strong participation numbers. It ranks first in afterschool participation rates with nearly three in ten children (28 percent) in Hawaii involved in an afterschool program. With strong participation rates and high average hours per week in afterschool programs (9.56), it is no wonder why Hawaii topped the list as the number one state for afterschool. However, Hawaii’s participation rate has fallen since 2004 and the state budget situation makes it unlikely that new funding will be available to continue the progress.

Behind the Numbers:
One of the primary reasons for the success of afterschool in Hawaii is the After School Plus (A+) Program. Established in 1990 by the Hawaii Department of Education, the A+ program provides afterschool care (including homework assistance, enrichment activities and supervised recreational activities) until 5:30 p.m. each school day during the regular school year. More than 190 elementary schools in the state participate in the program. The A+ program is available statewide to all elementary children whose parents work, attend school or are in job-training programs. While there is a participation fee, the Department of Human Services has a "memorandum of agreement" with the Department of Education to use Child Care and Development Fund dollars to subsidize the cost of care for eligible children. Currently, the program is supported with $6 million in state general funds and the current agreement provides for a payment of $80/month for each eligible child. In addition, Hawaii has a strong military presence and the military has committed to afterschool programs and also has centralized systems for locating afterschool programs, which helps increase participation rates as well as satisfaction with the availability of programs.
Parents in Arizona are benefitting most from the amount of hours per week their children are spending in afterschool programs, with children in the state averaging more than 11 hours per week in afterschool programs. However, that does not tell the entire story of why Arizona made the top 10 list. The state also ranks in the top five in lowest self-care percentage (22 percent) as well as satisfaction with program quality (89 percent), activity variety (88 percent) and affordability (79 percent).

**Behind the Numbers:**

Arizona has seen a fair share of public support for afterschool, particularly in its major cities. Phoenix has committed considerable funds to supporting afterschool programs. Local officials in Arizona’s capital devoted more than $60 million in city, state and federal funds to afterschool programs, providing 30,000 to 50,000 children with quality care in the afternoon hours. Similarly, the government of Tucson, Arizona’s second largest city, has also invested heavily in afterschool programs, particularly those that take place in public facilities, such as schools. At the state level, Arizona legislators have also contributed, providing $9 million to support afterschool programs.
New York

New York ranks second overall in participation (21 percent) and among the top 15 states in nearly all of the criteria used for devising the top 10 list, including average hours per week (8.66), lowest self-care percentage (25 percent), percent of high need children served (44 percent) and overall satisfaction with afterschool programs (55 percent). This well-rounded state stands out as a model for other states to follow in ensuring higher participation, lowering the number of children in self-care, and creating high satisfaction with afterschool programs. Yet, even in a state as advanced as New York, too many children and families are unable to access quality, affordable afterschool programs.

**Behind the Numbers:**

New York’s state afterschool investment totaled $82 million in FY10, which included $30.6 million for Advantage After-School, $23.6 million for Youth Development and Delinquency Prevention and $27.8 million for the Extended Day/ Violence Prevention Program. Much of the Advantage After-School investment comes from the federal assistance program known as TANF (Temporary Assistance for Needy Families). Across funding streams, New York has a strong focus on building and funding collaborations between schools and community-based partners, which likely pays off in satisfaction and quality.
Even amongst the turmoil of severe budget cuts in California over the past few years, the state still stands as one of the premiere states for afterschool programs in the nation. California ranks in the top ten in afterschool participation (19 percent), average hours per week spent in afterschool programs (9.29) and lowest self-care percentage (24 percent). It is also one of only two states to rank in the top 25 in every category used to devise the top 10 list (the other is New Jersey). California’s large investment in afterschool is paying off with larger than average percentages of its families enjoying quality programs that keep kids safe and inspire them to learn.

**Behind the Numbers:**

California’s After School Education and Safety (ASES) Program is the result of the 2002 voter approved initiative, Proposition 49. The ASES Program funds local afterschool education and enrichment programs. These programs, which provide tutoring and additional learning opportunities for students in kindergarten through ninth grade, are created through partnerships between California’s schools and local community resources. Funding for the program is designed to provide afterschool programs to all elementary, middle and junior high schools throughout California. The current funding level for the ASES Program is $550 million.
New Jersey

In recent years, New Jersey has been moving toward building a strong afterschool network and working toward greater access to afterschool programs for its children in need. It shows, as New Jersey ranks in the top five in both satisfaction with afterschool programs availability (68 percent) and hours per week children spend in afterschool programs (10.48). These are the marks of a state that provides immense benefits to both its children and its parents. While children are receiving nearly 11 hours of quality afternoon care from afterschool program providers, many of New Jersey’s working parents can rest assured that their children are safe from the end of the school day to the time that they get out of work.

Behind the Numbers:

New Jersey has produced several major campaigns to support afterschool programs. In 1988, the Office of Early Care and Education of the New Jersey Department of Human Services developed state-funded Family Friendly Centers, which provide $2.5 million in grants to afterschool programs providing enrichment activities to their participants. Additionally, in 2004, New Jersey After 3 was founded to increase afterschool support systems for families. Currently, New Jersey After 3 has approximately $14 million in state funds used to support grant-making to community-based organizations working with schools. The goal of New Jersey After 3 is to serve 20,000 children with high quality afterschool programs.
Virginia

Unlike many of the states that made this top 10 list, Virginia does not have standout numbers in afterschool participation or hours per week in afterschool. Instead, Virginia makes this list because of its efforts to serve those in need, reduce the number of children in self-care and provide quality, accessible afterschool programs. Virginia ranks first in serving its constituents with the greatest need. More than 60 percent of children participating in an afterschool program in Virginia qualify for a reduced price lunch each day, an indication that they come from low-income households. In keeping with this theme, Virginia also ranks among the top 10 in satisfaction with the cost (73 percent) and availability (67 percent) of its afterschool programs as well as lowest self-care percentage (24 percent).

Behind the Numbers:

School boards in many of Virginia’s larger districts made a concerted effort in the 1980s to make before and after school care available to more families. Since then, districts across Virginia have continued to support afterschool at the local level. Responding to residents’ needs due to long commutes, the Northern Virginia suburbs near Washington, D.C. such as Fairfax County, have offered fee-based afterschool programs for decades and have augmented them with supports for low-income families through school district investments and grants. Newport News is one great example of Virginia’s afterschool development at the local level. The city funds a project within its Parks and Recreation Department, which works closely with Newport News schools, to create a strong system of afterschool programs.
New Mexico

Ranking second overall in self care (22 percent) and in the top 10 in both afterschool participation (17 percent) and average hours per week in afterschool (9.39) lands New Mexico on the list of the “Top 10 States for Afterschool”. Parents in New Mexico also report strong satisfaction with the variety of activities available in the state’s afterschool programs (83 percent). In this way, New Mexico stands out as a state where parents are satisfied with the quality of care and the array of activities offered by afterschool programs that engage their children.

Behind the Numbers:

In recent years, New Mexico began to invest a significant amount of state funds in afterschool programming. Appropriations for afterschool peaked in 2008 at $3.3 million, but during this past legislative session, with a bad budget forecast, this number was cut to $1 million. In addition to this funding, The Next Generation Fund has created some additional fiscal support for New Mexico’s afterschool programming. The fund was created with a $2 million appropriation to leverage private, philanthropic funding for youth development. New Mexico has also attracted outside funders, such as the Kellogg Foundation and Atlantic Philanthropies, because of the state’s high population of low-income youth. Additionally, Albuquerque, like other large school districts in the state, offers afterschool programs in most of its elementary schools, serving nearly 13,000 children in New Mexico’s largest city.
Florida

Florida makes the top 10 list because of its strong numbers in afterschool participation and below average self-care rates. In Florida, one in five children (20 percent) participate in an afterschool program. That exceeds the national average of 15 percent. With a wide array of urban, suburban and rural populations, Florida’s impressive participation numbers ensure that above average percentages of children from all different backgrounds are receiving the care and enrichment they need in the after school hours.

Behind the Numbers:

Linked with schools and community partners, Florida has a tradition of effective fee-based afterschool programs. However, Florida also maintains a unique resource in garnering greater afterschool funds: the Children’s Services Commissions. These county based, publicly funded groups receive property tax funds devoted to meeting the needs of children. This property tax levy brings in millions of dollars for youth development and child care in the larger communities such as Jacksonville, Miami-Dade, Palm Beach County, Pinellas County, Hillsborough County and Marin County. The Children’s Services Commissions across Florida support afterschool programs, resulting in afterschool opportunities at either no-cost or low-cost for families.
Texas

Texas’ afterschool programs rank in the top 10 in satisfaction in both quality of care (85 percent) and variety of activities (84 percent). More impressive though is the percentage of high-need children served in Texas. More than half the state’s afterschool participants (53 percent) qualify for reduced priced lunches. This places Texas third among all states. This combination of providing parents with quality care, providing children with a variety of activities and serving a high need population makes Texas one of the “Top 10 States for Afterschool” in the country.

Behind the Numbers:

In Texas, the Texas Workforce Development Board is the lead agency for child care funds. Texas has 14 local Workforce Development Boards that locally match contracts for afterschool child care with a total of 24 independent school districts across the state, including Austin, Dallas and El Paso. Fee-based school-age care in Texas is widely available. It is also customary for schools in Texas to have an ‘eighth period’ that contain school activities that are not curriculum based, much like the activities many traditional afterschool programs provide. Texas is also home to JCPenney and with more than $80 million contributed to afterschool programs over the past 10 years, JCPenney stands out among the nation’s corporations for helping to support afterschool opportunities for kids and families.
North Carolina

The main message from the *America After 3PM* survey coming out of North Carolina is that North Carolina parents are happy with their after school care, if they have access to it. Parents of afterschool participants from North Carolina are relatively satisfied with the availability of afterschool programs; two-thirds of parents (66 percent) report satisfaction. What’s more, six in ten parents (64 percent) also report that they are extremely satisfied overall with the afterschool program their child attends. Pair this high level of satisfaction with the fact that North Carolina ranked in the top five in hours per week spent in afterschool (9.66) and one can easily see how North Carolina made the top 10 list.

**Behind the Numbers:**

Until recently, North Carolina had $6.3 million in funding for afterschool from the Save Our Students (SOS) Program. During fiscal year 2007-2008, programs receiving funds from SOS served more than 14,000 youth in more than 200 sites across the state. Funding for Save Our Students was given to each county in North Carolina with the stipulation that county officials use the funds for youth programming with an eye toward reducing juvenile crime and helping students succeed. Additionally, two years ago the North Carolina state legislature approved a pilot program for afterschool supports that provided three schools with $5.3M multi-year grants for implementing afterschool programs with special attention to the effectiveness and replication potential of each.
States on the Move to Afterschool for All

Overall, America After 3PM finds that while more kids are in afterschool programs today than five years ago, the demand for programs has also increased – and the growth in programs has not kept up with rising demand. As a result, more children are unsupervised after the school day ends now than in 2004.

As expected, the findings vary considerably from state to state. Through an examination of a number of key indicators, a set of six “States on the Move to Afterschool for All” emerged. While all states have significant unmet need for afterschool programs, comparatively these “States on the Move” have made the greatest progress in afterschool participation since 2004, decreasing or holding relatively steady the number of kids in self care and showing other promising attributes related to afterschool. All in all, the “States on the Move to Afterschool for All” have been successful in increasing participation in quality afterschool programs, limiting the incidence in self care over the past five years and advancing the field of afterschool within their states.

Methodology:

To identify the “States on the Move” a composite score was computed (for each state) combining the following variables:

- Change from 2004 to 2009 in Percentage of Kids in Afterschool Programs
- Change from 2004 to 2009 in Percentage of Kids in Self Care – inverse proportion since lower rates of self care are better
- Total Number of Times the State Appeared on a 2009 Top 10 List (see back of this report)
  
Formula:  \[
(\text{Change in Afterschool Program Participation} + \text{Change in Self Care}) \times \text{Total Number of Top 10 Appearances}
\]

The six “States on the Move” identified in this document are those with the highest values. The overall “Top 10 States for Afterschool” (Hawaii, Arizona, New York, California, New Jersey, Virginia, New Mexico, Florida, Texas and North Carolina) were excluded from this analysis and not eligible to be named “States on the Move to Afterschool for All.” Descriptions of the “Top 10 States” are included in a separate report available at: www.afterschoolalliance.org/AA3PM_Top_Ten.cfm

The “States on the Move” are identified on the following pages with an overview of the data from the state that helped it make the list of “States on the Move,” followed by a description of how the state has helped afterschool programs in the past five years. In addition to state-level efforts, every state benefits from the availability of federal funding through the 21st Century Community Learning Centers initiative and the Child Care and Development Block Grant (CCDBG). Furthermore, the Charles Stewart Mott Foundation has supported 38 states, including all of the “States on the Move,” through its support for Statewide Afterschool Networks, which help improve both the quantity and quality of afterschool programs in their states. Below is a summary of the how each of the “States on the Move” benefited from these national supports.

* The CCDBG dollar amounts shown equal one-fourth of the state’s total CCDBG funding. Researchers estimate that one-fourth of all CCDBG funding is used for school age child care, which includes afterschool programs.

While these states have made notable progress, it’s important to note that *America After 3PM* finds significant unmet need for afterschool programs across all states. Even in the “States on the Move to Afterschool for All,” the number of children who would be in programs, if programs were available, outnumbers the number of children currently able to participate.

In all 50 states, there are parents who want their kids in afterschool programs and aren’t able to find them, usually because programs aren’t available, they can’t afford the fees, or transportation issues make it impossible. These are barriers the nation can and should overcome. Quality afterschool programs keep kids safe, inspire them to learn, and help working families. Every state, and the nation as a whole, has a long way to go to ensure that all our children have access to quality, affordable afterschool programs.
Minnesota

Over the past five years (from 2004 to 2009), Minnesota has been more successful than any other state in improving access to afterschool programs and reducing the number of kids unsupervised. Although still trailing the national average, afterschool participation rose markedly in Minnesota, from eight percent in 2004 to 12 percent in 2009. In addition, and perhaps most importantly, Minnesota was one of only a few states to show a dramatic reduction in the percentage of children in self care from 2004 to 2009. Minnesota also ranks among the top 10 states in afterschool program availability, satisfaction with afterschool program quality and satisfaction with program activity variety. With a growing number of children in afterschool programs, a satisfied afterschool population and fewer youth in self care over the past five years, Minnesota is the quintessential “State on the Move to Afterschool for All.”

Behind the Numbers:
Minnesota has two primary funding sources that have contributed to increased afterschool participation in the past five years.
1. Minnesota is one of only a few states with a history of a local school tax levy that is used for ‘community education.’ While the funding from these local taxes is not enough to fully finance an afterschool program, the tax has served as an important base of support for many school based afterschool programs in the state.
2. Youth Community Connections – the Minnesota Afterschool Alliance and its partners have worked together to create a new state funding line item to support afterschool programs. In response to an appeal from the McKnight Foundation for greater state funding for afterschool programs, the Minnesota state legislature appropriated $2.3 million for the first year of its biennium budget and $3.2 million for the second year. Unfortunately, this funding was not renewed in the midst of the recent economic downturn, and Minnesota may be in jeopardy of losing its major afterschool gains in the coming years.
Since 2004, Washington has increased its percentage of children participating in afterschool programs from eight percent to 12 percent. While this participation rate still trails the national average of 15 percent, the state is making progress in increasing the number of children who benefit from afterschool programs. In addition, Washington is in the top 10 states in terms of satisfaction with the variety of activities in its afterschool programs, program cost, and ensuring that high percentages of children who qualify for free or reduced priced lunch participate in afterschool programs. Yet, it is noteworthy that the state saw no decrease in the percentage of children unsupervised after school since 2004.

**Behind the Numbers:**
After years of trying to secure more funds for afterschool, Schools Out Washington succeeded in getting a $3 million appropriation for afterschool funding, as well as professional development supports, in the 2007 state biennial budget. In addition, Governor Gregoire appointed the Washington Learns Task Force to focus on aspects of education from pre-K to higher education, and its scope of work can include afterschool. While none of the $3 million appropriation were renewed once the recession hit in 2009, the state did benefit from these additional funds for afterschool for two years. However, with the recent reduction in funding, the state’s kids and families are at-risk of losing the ground so recently gained.
Maryland

A top 10 state in both afterschool program participation and hours per week spent in afterschool, Maryland barely missed making the list of “Top 10 States for Afterschool.” Lucky for Maryland, the state also has seen one of the most dramatic improvements in afterschool participation over the past five years. Maryland went from a mediocre 10 percent participation rate in 2004 to 17 percent in 2009, which is above the national average of 15 percent. Although there is certainly more work to do in the state, which saw rates of children in self care also rise from 2004 to 2009, the state has proven itself to be not only a “State on the Move to Afterschool for All” but also one of the leading states for afterschool programs in the country.

Behind the Numbers:
Maryland has several reasons for its “On the Move” status. In FY 2009, the state directed $5.16 million dollars to out-of-school time programs. In addition, the city of Baltimore has partnered with the Baltimore City Schools and other local philanthropic organizations to support the BOOST – Baltimore Out of School Time – Initiative. The city of Baltimore invested 4.5 million and the programs that receive BOOST funding are required to provide 20% percent in matching funds, which brings the total BOOST investment to near $5.5 million. BOOST supported programs feature collaboration between community-based organizations and schools. There is also a significant investment in Montgomery County. Excel Beyond the Bell is a public-private partnership dedicated to ensuring all children and youth in the county have access to high quality, safe and enriching out-of-school time programs that build brighter future. Montgomery County currently invests $7.3 million dollars in out of school time programs.
Oregon

Oregon has seen some great gains in afterschool over the past five years. Since 2004, the state’s afterschool participation rate has risen five percent and Oregon also ranks in the top 10 states in average hours per week that children spend in afterschool and percentage of high need children served. While Oregon is certainly on the right track to increase the availability of its afterschool programs, like many states on this list and across the country, there is still work to be done as the percentage of children in self care has gone up in the state.

Behind the Numbers:
Two years ago Oregon revamped its funding of schools and improved the amount of state funds for those in need of improvement. The total cost of that legislation was $250 million aimed at schools with at-risk populations. The amount from that fund used for afterschool programs is estimated to be about $3.7 million.

There is also local support for afterschool programs in Oregon. Some local communities have invested funds to support community schools and afterschool programs through special tax initiatives. In November 2002, two cities passed property tax measures that support children’s initiatives. The Portland Children’s Initiative provided $50 million over five years for early childhood education, afterschool programming, mentoring and child abuse prevention programs. The Eugene School Activities Levy offset cuts to local schools by providing almost $8 million annually for four years for art and music teachers, school counselors, and afterschool programs.
Massachusetts

Massachusetts is one of only a handful of states to see afterschool participation increase by seven percent from 2004 to 2009; no state had a larger increase. Though tempered by an alarming five percent increase in self care over the past five years, Massachusetts is nonetheless a state making progress. In addition to its 18 percent afterschool participation rate, the state lands in the top 10 amongst all states in overall satisfaction, and is ranked as the number one state in terms of program availability.

**Behind the Numbers:**
In addition to a substantial investment in afterschool by the City of Boston and the Wallace Foundation, in recent years the state legislature approved funding for After School and Out of School Time (ASOST) grants. The ASOST grants were used to support school-community partnerships for afterschool programs. During the period that data were collected for America After 3PM, the program was receiving $5.5 million in funding. However, during the most recent legislative session, in face of revenue shortfalls, the program’s funding was cut to $2 million. Like so many of the “States on the Move,” Massachusetts is in danger of losing ground for afterschool due to recent state funding cuts.
Ohio

Ohio ranks in the top 10 states in terms of overall satisfaction with afterschool programs, and ranks third overall in satisfaction with the quality of afterschool care. These rankings, coupled with a five percent increase in afterschool program participation, have landed Ohio on the “States on the Move” list. However, as is the case in most other states, Ohio self care rates increased over the past five years. Still, in comparison to other states, Ohio has taken significant steps forward and is one of just six “States on the Move to Afterschool for All”.

Behind the Numbers:
Ohio has had a complicated history of support for afterschool programs. In the last year of his term, former Governor Bob Taft declared by executive order that $28.5 million of expiring Temporary Assistance for Needy Families (TANF) funds be allocated to support afterschool programs at schools in counties of need. The complicated nature of the program, which required serving TANF eligible families as well as a partnership among school districts, schools, community-based organizations and local offices of the Ohio Department of Jobs and Family Services, was a barrier to full utilization of the available funds. In the end, $18.5 million was accessed by afterschool programs. The legislature continued the use of TANF funds for afterschool programs over the following two years. In the 2010-2011 budget, with excess TANF funds depleted, the Ohio House restored 90% of afterschool funding via general revenue dollars, but the funds were removed by the Ohio Senate and not restored by Governor Strickland. With Ohio’s state afterschool funding gone, providers are looking to local initiatives, stimulus dollars and other funding sources. The move of the Ohio Child Care Bureau from the Department of Jobs and Family Services to the Department of Education provides an opportunity for afterschool advocates to craft how that move affects school-age child care providers and the subsidized child care system, which could result in more resources for afterschool.

Note that the elementary, middle and high school projections do not add up to the total number of children in each category because different responses and projection bases were used for the totals and the grade level percentages and projections. For the state totals, the total school age population was tabulated according to population numbers from the U.S Census Bureau. Conversely, data from the U.S Department of Education showing grade level enrollment in public and private schools was used as the base for all grade level projections.

About New Hampshire After 3PM

In New Hampshire, 359 households were surveyed for this study. Among those households, 24 percent qualified for free or reduced price lunch, 1 percent were Hispanic and 0 percent were African-American. According to U.S. Department of Education data from 2005-2006, the total school enrollment in New Hampshire is 224,877, which is the foundation for all statewide projections in New Hampshire After 3PM.

About Wyoming After 3PM

In Wyoming, 176 households were surveyed for this study. Among those households, 34 percent qualified for free or reduced price lunch, 5 percent were Hispanic and 1 percent was African-American. According to U.S. Department of Education data from 2005-2006, the total school enrollment in Wyoming is 85,582, which is the foundation for all statewide projections in Wyoming After 3PM.
TOPLINE DATA

PARTICIPANTS and NON-PARTICIPANTS COMBINED

1. Shown below are different types of care a parent or guardian might use to care for children after the school day. During a typical week of the 2008-2009 school year, please indicate which of the following caregivers you used and how many of your children were regularly cared for by each type of caregiver in the hours after school. Please just write in the number of children cared for by each type of caregiver in the hours after school (3-6 p.m.).

   Parent or guardian .......................................................... 70%
   Sibling (brother/sister) ...................................................... 14%
   Another adult relative (such as a grandparent, aunt or uncle) .......................................................... 24%
   Another adult (not a relative, such as a neighbor or paid sitter) .......................................................... 10%
   Childcare facility or family childcare center .......................................................... 10%
   Looking after him/herself (self-care) .......................................................... 26%
   Afterschool program .......................................................... 15%

   Sample population base: 29,754

2. Does your child(ren) qualify for free or reduced price lunch at school?

   Yes .......................................................... 39%
   No .......................................................... 51%
   Not Sure .......................................................... 9%

   Sample population base: 28,162

3. During the 2008 summer, did your child(ren) participate in a summer learning program that is a safe, structured program that provided a variety of activities designed to encourage learning and development during the summer months?

   Yes .......................................................... 25%
   No, but I have an interest in .......... 42%
   No, and I do not see the need .... 33%

   Sample population base: 28,336

4. Do you agree or disagree that there should be some type of organized activity or place for children and teens to go after school every day that provides opportunities for them to learn?

   Completely agree .......................................................... 63%
   Somewhat agree .......................................................... 27%
   Neither agree nor disagree .......................................................... 8%
   Somewhat disagree .......................................................... 1%
   Completely disagree .......................................................... 1%

   Sample population base: 28,434
5a. Do you favor or oppose public funding for programs that provide afterschool opportunities to students in communities that have few opportunities for children and youth?

5b. Do you favor or oppose public funding for programs that provide summer learning opportunities to students in communities that have few opportunities for children and youth?

Note: For the purposes of this survey, an afterschool program is defined as a program that a child regularly attends that provides a supervised enriching environment in the hours after the school day ends. These programs are usually offered in schools or centers and are different from individual activities, such as sports, special lessons, or hobby clubs.

1. Sometimes it is difficult to make arrangements to look after children all the time. During a typical week of the 2008-2009 school year, how many hours did each of your children spend looking after him/herself? Please respond only for after school hours (3-6 p.m., maximum of 15 hours per week)

   Up to 5 hours per week ................................. 45%
   6 – 10 hours per week ........................................... 25%
   11 – 15 hours per week ........................................... 30%
   More than 15 hours per week ............................... 0%
   Mean: ................................................................. 8.1
   Median: .............................................................. 6

   Sample population base: 972

2. During a typical week of the 2008-2009 school year, how many hours did each of your children spend in the care of a sibling under the age of 13? Please respond only for after school hours (3-6 p.m., maximum of 15 hours per week)

   Up to 5 hours per week ................................. 67%
   6 – 10 hours per week ........................................... 20%
   11 – 15 hours per week ........................................... 13%
   More than 15 hours per week ............................... 0%

</tbody>
</table>

9. An afterschool program is defined as a program that a child regularly attends that provides a supervised enriching environment in the hours after the school day ends. These programs are usually offered in schools or centers and are different from individual activities, such as sports, special lessons, or hobby clubs. If a program as described was available in your community, please indicate how likely you would be to have your children participate in such an afterschool program?

<table>
