New Survey: Afterschool Programs Still Struggling in Recession's Aftermath

Pennsylvania Providers Are Particularly Hard Hit

WASHINGTON, D.C.—As the nation's children head back to school, a new survey released today by the Afterschool Alliance holds tough lessons about the outlook for afterschool programs: Amid a rocky economic climate and budget-tightening at the local, state and federal levels, many afterschool programs face shrinking resources and uncertain prospects even as they are already struggling to meet the needs of children and families in their communities.

In Pennsylvania, compared to the national average, the effects of the economy are more severely impacting afterschool programs. Based on responses from 64 program providers in the state—of which 60 percent are located in urban communities, 28 percent in suburban communities and 18 percent in rural communities—Pennsylvania afterschool programs are facing greater budgetary problems and are forecasting a significantly bleaker financial future than afterschool programs as a whole nationally. Also, compared with afterschool programs nationwide, Pennsylvania providers are more likely to report that their communities are deeply affected by tough economic times, and they are more likely to report that they are not able to meet the needs of their communities.

Nearly half of Pennsylvania afterschool programs (47 percent) report that their budgets are in worse shape today than at the height of the recession in 2008, a result that's eight points higher than the national figure (39 percent). More than seven in ten Pennsylvania programs (71 percent) report that their funding is down "a little or a lot" from three years ago, nine points above the national result (62 percent). That leaves many afterschool programs—which provide children with a safe and supervised space, hands-on educational opportunities, and access to homework help, mentors and other caring adults—unable to fully support the children in their communities who are most in need of afterschool now, and without the financial security to do so in the future.

Funding pressures have forced programs to make difficult decisions. The top three changes instituted by Pennsylvania afterschool programs as a result of funding cuts or budget stagnation are: fee increases, elimination or reduction of field trips, and reduction in the variety of activities offered.

The results are part of the Afterschool Alliance's [*Uncertain Times*](#) survey project, the only research effort to examine how the economy affects afterschool programs. The Afterschool Alliance previously conducted *Uncertain Times* surveys in 2006 and 2009.

“It’s disheartening to see that there are children and families in Pennsylvania who need and deserve the support of afterschool programs but are getting shut out,” said Kacy Conley, director of the Pennsylvania Statewide Afterschool/Youth Development Network. “Unless we can make a full investment in afterschool programs, the future for Pennsylvania’s children may not be as promising as it should be.”

Among other key findings of the new *Uncertain Times* survey:

- More than eight in ten Pennsylvania programs (86 percent) report that children in their communities need afterschool care but are unable to access it, similar to the national result (88 percent).
- Nearly two-thirds (61 percent) report that their budgets are inadequate to meet the needs of their communities, four points higher than the national result (57 percent).
- Twenty-five percent report that they would need to at least double their capacity to meet the needs of all the kids in their communities, one point higher than the national result (24 percent).
- Eighteen percent of programs report that a loss of funding caused major cutbacks or shut down sites, two points higher than the national result (16 percent).
- Nearly all programs (96 percent) anticipate that the challenging economic climate will affect their programs during the 2012-2013 school year, 11 points higher than the national result (85 percent).
- Pennsylvania afterschool programs serve a high-needs population, with an average of 63 percent of children qualifying for free or reduced-price lunches, 13 percent with special needs or learning differences, and 10 percent classified as Limited English Proficient.

“The latest *Uncertain Times* results are a painful reminder that the nation’s slow road to economic recovery is a particularly rough journey for the afterschool programs that children, families and educators rely on,” said Jodi Grant, executive director of the Afterschool Alliance. “These programs are not a luxury; they’re vital to a bright future for children all across the country.”

“In the midst of these harsh economic realities, afterschool program leaders are being forced to make painful decisions,” Grant added. “The students they serve are at risk of being denied access to afterschool programs, which keep kids safe, inspire them to learn and help working families. Afterschool providers need enough resources to help all the students and families who need them. We are far from that funding level today.”

Policy recommendations by the Afterschool Alliance to help speed up recovery for afterschool programs include increasing support for 21st Century Community Learning Centers, the only federal funding stream dedicated to before-school, afterschool and summer learning programs; increasing funding for the Child Care Development Block Grant to provide child care vouchers to more eligible families; allowing existing federal funding streams—such as those for STEM (science, technology, engineering and math) skill-building and youth health initiatives—to help support afterschool programs; and including language in the Workforce Reinvestment Act and the Juvenile Justice and Delinquency Prevention Act to help before-school, afterschool and summer programs reach middle school and high school students.

[Uncertain Times 2012](#) used Web-based survey software to poll more than 26,000 contacts between April 25 and June 8, 2012. Results are based on 1,012 survey responses, representing 4,947 afterschool sites serving more than 567,470 children in urban (45 percent), suburban (30 percent) and rural (31 percent) communities across the United States.
